

ANGELO

Industrial Hemp Variety | Newly released in 2025

DESCRIPTION

Angelo is an open-pollinated dioecious grain variety bred in western Canada for both organic and conventional cropping systems. This variety features excellent harvestability and a superior harvest index due to its moderate stature, and moderately large seed size. Angelo exhibits an early aggressive growth habit, intermediate maturity plus a stable THC profile.

UTILIZATION

Angelo is a very versatile grain variety and well adapted for top agronomic performance in both dryland and irrigated production in Western Canada and the Northern US states. The larger seed size is attractive for both ingredient processes like dehulling, and increased harvesting and cleaning efficiencies for farmers. Angelo tolerates both pre-seed and post-seeding herbicides providing flexibility in weed management.

ANGELO (dioecious grain)

Origin	Western Canada
Seeding Rate	25-30 lbs/acre
Usage	High-Yield Grain Production
Maturity	105+ days
Time of Flowering	~ 53 days after seeding
Height (Canada 53N)	135-170 cm
1000 Kernel Weight	~ 16 grams
THC Avg. Percentage	~ 0.07%
CBD to THC Ratio	15:1
